Q1

Why do users struggle to discover new music?

62% of reviews (513 out of 832) contain discovery-related complaints

Overall Sentiment Split

Positive (80) Neutral (730) Negative (22)

Evidence: Real User Reviews on Discovery

PLAY STORE ★★★★★

"The song suggestions never feel repetitive or boring. 🌈🌟"

PLAY STORE ★★★★★

"The recommendations are relevant and rarely repetitive. 🎯🌈"

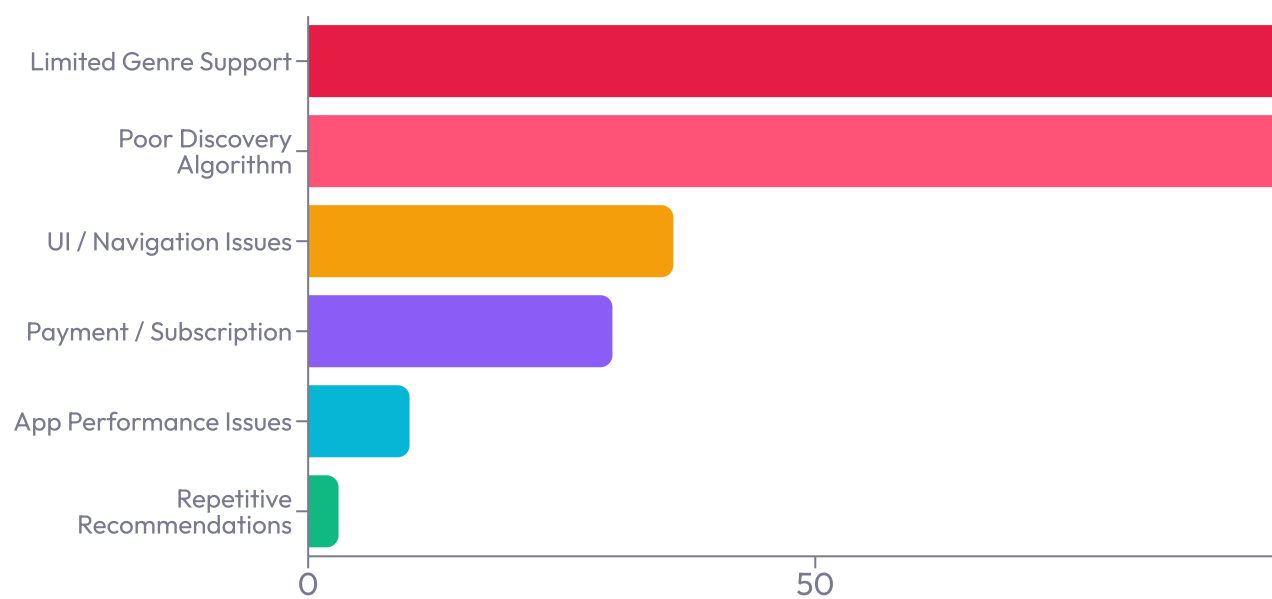

PLAY STORE ★☆☆☆☆

"very bad experience, I got offer of geeting un intrupted music at just 1 rs and when I availed that offer, my music is still getting paused and the platform is asking to subscribe not recommended this app, try something else"

Q2

What are the most common frustrations with recommendations?

Keyword-matched frustration categories across all 900 reviews

Q3

What listening behaviours are users trying to achieve?

Detected from keyword patterns in review text

Seeking New Discoveries	333
Artist / Album Deep Dive	167
Playlist Curation	44
Mood-Based Listening	15
Background Listening	3

Q4

What causes users to repeatedly listen to the same content?

Root causes extracted from repetition-related complaints

Algorithm Echo Chamber	303
Excessive Autoplay	150

Key Insight

- 

Algorithm Echo Chamber
The recommendation engine over-fits to past listening history, creating a self-reinforcing loop of familiar content.
- 

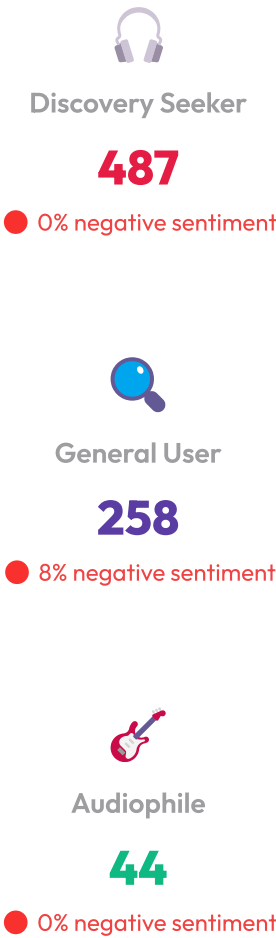

Limited Content Exploration UI
Users report no clear entry point to actively "explore" — there is no dedicated discovery mode that surfaces truly new content.
- 

Autoplay Behavior
Autoplay defaults to related tracks from the same artist/genre, trapping users in a narrow listening bubble.

Q5

Which user segments experience different discovery challenges?

Segment breakdown with their frustration intensity (% negative reviews)

Q6

What unmet needs emerge consistently across reviews?

Extracted by the LLM from the most critical negative and discovery-seeking reviews

Real OpenAI API key not yet set — unmet needs will be extracted automatically from review clusters once you add your key to .env. Showing qualitative analysis below:

Deeper Genre Exploration

Users — especially Discovery Seekers and Audiophiles — want a way to actively explore micro-genres like Indian Indie, regional classical, or city pop without being pulled back to mainstream tracks.

"Surprise Me" Feature

Multiple reviews request a one-tap button that plays something completely outside the user's listening history — an AI-curated wild card.

Transparent Recommendation Reasoning

Power users want to know WHY a song was suggested. A "Because you liked X..." explanation would build trust in the algorithm.

New Release Alerts for Followed Artists

Users want proactive push notifications when a followed artist drops new music — not just a buried update in the app.
